

CAD Gorilla for Schools

Preparing students to become proficient Autodesk software users in an environment of budget cuts and limited resources is a challenge. CAD Gorilla can help with a complete learning solution for Autodesk students that is effective, engaging, and affordable.

CAD Gorilla's Blended Learning Approach

CAD Gorilla is a complete library of instruction that will increase skills and serve as a convenient on-demand reference as students progress along their learning path.

CAD Gorilla facilitates self-paced learning which is ideal as a growing number of students are being asked to learn on their own, on top of an already demanding curriculum.

CAD Gorilla is the ideal teaching assistant with lab and instructor time being limited, putting a wide range of topics at students' fingertips is critical.

CAD Gorilla is a convenient resource available on-demand 24/7 that allows students to find answers to their questions without the need to visit a computer lab or speak to an instructor – critical when project deadlines are looming.

CAD Gorilla is not a tutorial, it's better. A typical tutorial teaches you how to do one thing, one way. For students to become serious designers, their skills have to be more adaptable than that.

Our lessons go beyond step-by-step button clicks, offering students deeper insight about techniques and applications. Our approach to instruction is concept-based, ensuring students can tackle any type of challenge.

CAD Gorilla Provides

a comprehensive library of multimedia training right to your desktop and includes many advanced features necessary for today's dynamic learning environments.

- ☒ Search On-Demand
- ☒ Custom Course Tools
- ☒ Easy Implementation Process
- ☒ Online testing and reporting
- ☒ Downloadable part files

CAD Gorilla is available online through our easy to use web platform without the need for any software installation.

CAD Gorilla's "Search-On-Demand" access makes it easier than ever for students to quickly search and view lessons to aid in resolving design problems and improve their skills.

Autodesk Certification

Autodesk certifications can be used as a benchmark to measure a person's knowledge and competency with Autodesk software. Exams focus on the fundamental skills necessary to ensure overall success using the software.

Obtaining a certification from Autodesk means students will stand out from the crowd in today's competitive job market.

Certification is proof of expertise, and assurance to employers that students have the cutting-edge skills that businesses seek out and reward.

CAD Gorilla's training library is a critical tool to successfully passing the exams. They provide students with the skills and knowledge to use the software proficiently, and prepare them for both the certification exam as well as real-world skills that they can utilize in their designs.
